

Illuminating Theology With Psychological Science

An Introduction to Cross-Training

This work was created by Sarah Schnitker and Devan Stahl and is licensed under a CC-BY-NC-SA license.

Training Goals

By the end of the in-person training intensive, theologians will be able to:

- Explain multiple methods of epistemology and the process of the scientific method
- Articulate the role of theories in psychological research and the content of major theories related to suffering, virtue development, and aesthetics
- Understand ethics relating to research with human subjects and their role in the design and implementation of research
- Select appropriate research methods for specific empirical research questions
- Evaluate published empirical research, specifically identifying concerns of internal validity, external validity, and measurement
- Enter into a collaborative interpersonal and professional relationship with a psychologist
- Participate in research activities within a psychological laboratory

Assumption
#1:

Communicating
across
disciplines is
challenging.

*Please write down any words you need defined or think mean
something different across disciplines*

Assumption #2:

We will have
some jingle-
jangle fallacies.

Jingle – assumption that two different things are the same because they bear the same name

Jangle – assumption that two nearly identical things are different because they bear different names

Assumption
#3:

Psychologists test
hypotheses
regarding natural
claims.

**IN GOD
WE TRUST
ALL OTHERS
MUST BRING
DATA**

Assumption #4:
